

NGUYEN HUU NGHIA

Middle Frontend Developer

(+84) 859 255277 nhn280700@gmail.com linkedin.com/nghia-nguyen

Go Vap, Ho Chi Minh City | naming404.github.io/portfolio

PROFESSIONAL SUMMARY

Frontend Developer with 4 years of experience building performant web applications with Vue.js, Nuxt.js, React, and TypeScript. Improved Lighthouse scores by 73%, reduced production bugs by 40%, and optimized API usage by 60%. Strong in SSR/SSG and performance optimization. Interested in expanding into Backend and DevOps to build scalable end-to-end systems.

PROFESSIONAL EXPERIENCE

Frontend Developer - **GLODIVAL** Apr 2024 - Present

Travel & Visa Platform — Tour booking and online visa registration system

- Led the SSR migration to Nuxt.js 3 for a travel platform (~8,000 monthly visits), increasing Google Lighthouse score from ~55 to ~95 (+73%) and improving SEO performance.
- Migrated a legacy JavaScript codebase to strict TypeScript, cutting production bug reports by ~40% and improving developer onboarding.
- Architected a multi-layer performance optimization strategy (lazy loading, route-level code splitting, next-gen image formats), bringing LCP below 2.5s and CLS under 0.1 to meet Google's "Good" Core Web Vitals threshold.
- Architected Apollo Client caching for 15+ GraphQL queries, eliminating ~60% of redundant API calls and reducing data-fetch latency by ~300ms to improve perceived performance.
- Implemented end-to-end test coverage using Puppeteer for critical booking and visa registration user flows, catching regression issues before production deployment.

Tech stack: Nuxt.js 3, TypeScript, GraphQL, Apollo Client, SSR, TailwindCSS, Pinia, Puppeteer

Frontend Developer - **GLODIVAL** Aug 2023 - Mar 2024

CRM & ERP System — Internal company management platform

- Architected a real-time notification system using Socket.IO supporting 70+ concurrent internal users, achieving <200ms end-to-end delivery latency with zero message loss under load.
- Architected a shared Vue.js component library powered by Pinia, consolidating 5+ legacy workflows, reducing UI codebase size by ~30% and standardizing internal tools across 3 departments.
- Developed 8 real-time KPI dashboards using Chart.js, replacing manual Excel-based reporting and saving the operations team ~5+ hours per week.

Tech stack: Nuxt.js 3, TypeScript, GraphQL, Ant Design, Chart.js, Socket.IO, Pinia

Frontend Developer - **TMA SOLUTIONS** Mar 2023 - Jul 2023

Data Analyst Portal — Analytics platform for telecom communication data

- Built a reusable component library of 12 WCAG-compliant charts and tables from Figma designs, enabling cross-page reuse across 4+ portal pages and accelerating feature development by ~40%.
- Integrated multiple telecom data APIs for real-time monitoring dashboards, implementing retry logic and resilient error handling to reduce user-facing failures to near zero.
- Developed a one-click data export pipeline to Nextcloud (Excel/CSV), automating report generation and removing the need for manual data extraction.
- Bridged business and engineering by translating complex requirements into clear technical specifications to improve delivery stability.

Tech stack: Vue.js 3, TypeScript, RESTful API, Axios, PrimeVue, Chart.js, Socket.IO

Frontend Developer - **TMA SOLUTIONS** Jun 2022 - Feb 2023

Chair Management System — Seat management tool for 1,000+ employees

- Led frontend development of an end-to-end seat management system, delivering the product from concept to production and supporting daily internal operations.
- Engineered an interactive floor plan editor using Konva.js with drag-and-drop layout editing and real-time seat assignment, replacing HR's manual Excel-based seat management process.

- Implemented an Axios-based API sync layer to handle concurrent seat assignments and prevent double-booking in production.
- Designed and implemented the frontend architecture from scratch, delivering a production-ready product and owning the end-to-end implementation.

Tech stack: *Vue.js 3, TypeScript, RESTful API, Axios, PrimeVue, Konva.js*

TECHNICAL SKILLS

Languages	JavaScript, TypeScript
Frameworks	Vue.js 3, Nuxt.js 3, React.js
State Mgmt	Pinia, Vuex
Styling	TailwindCSS, SCSS / Sass, Ant Design, PrimeVue, Vuetify
Build & DevOps	Vite, Webpack, Docker, CI/CD, Git
Testing	Vitest, Vue Test Utils (unit testing), Puppeteer
Concepts	SSR, SSG, CSR, SPA, Core Web Vitals, SEO, Responsive, WCAG, Agile/Scrum, Code Review

NOTABLE ACHIEVEMENTS

- Delivered +73% Lighthouse performance improvement (55 → 95) across two production travel and visa platforms via SSR migration and Core Web Vitals optimization.
- Reduced frontend production bugs by ~40% through TypeScript migration, type-safe architecture, and structured code review processes.
- Built and launched a seat management system end-to-end as sole frontend engineer, supporting daily operations for 1,000+ employees.

EDUCATION

Bachelor of Software Engineering — Can Tho University
English Proficiency: B1 (Communicative)

2018 - 2022
